Important Clarification for understanding:-

1. Cameras should ideally be integrated with the Audio Conference System; when a microphone is switched ON, the camera should automatically focus the speaker and provide video to the Video Conference system for sending to remote end.
2. A facility for manual over-riding of presets must be provided where the Operator can adjust the frame of the speaker as per requirement. But, the system should not be manual and must be automatic in terms of camera movements.
3. Feature of Voice Activated Delegate units is also required and has been specified in the specifications of the Digital Conference Room System Controller as well as the Delegates.
